

Direct Private Prepaid Electricity Vending Service

MOBI 
POWER

We put you in control of electricity revenue collection

The closed vending service is used for the vending of STS electricity tokens in a closed system.

We control the token generation and empower landlords and managers to collect payment for electricity directly without any 3rd party or commission charges.

How does it work?

There is a main meter that distributes electricity to various prepaid meters in the building or on the property. The Utility bills for the main meter at the end of each month. Each of the tenants (sub meters) will pay for tokens used in their individual meters. These tokens are **GENERATED** by us but sold and the money collected for the tokens by the landlord or property manager.

How do you get meters and tokens?

It's easy. You order the tokens for the specific meters from Mobi Power when you need to. We charge a nominal processing fee and issue electricity tokens in 100kWh units at a fixed cost per token.

The landlord or manager then simply sells the tokens to their tenants and keep the cash to pay for the main electricity bill.

Order you tokens today via telephone or email @ tokens@mobipower.co.za.

You can also send an SMS to +27797986479 or come to our office located at Shop 6, Alves Centre 9 Jubili Street, Raceview, Alberton
